## Press Release

Re: Major New Scientific Work About Edgar Cayce And His Millennial Prophecies Is Unveiled In Three New Books Titled "Return of the Phoenix".

Release Date: Tuesday, September 5 , 2000

Contact: Michael W. Mandeville , 623-374-9585

Length: pages - 3, words - 849

BLACK CANYON CITY, AZ -- Michael Mandeville, an Arizona author, unveiled a major new title in literary science for a three volume trilogy, titled "*The Return of the Phoenix*". The author announced through his website that the work is now available in three forms, including in print, as a CDROM, or as ebooks through commercial websites.

The author, who lives in Arizona's Black Canyon, claims that the release of the work makes both literary and scientific history with several firsts. Mandeville explains that it is the first time that a complete anthology of the psychic predictions of Edgar Cayce have all been assembled and explained. The author collected thousands of Cayce's clues from the Cayce archives and condensed them into one summary story which he presents in "*The Return of the Phoenix*" as the story of the "World Epic". Included in this story is an outline of Cayce's descriptions about the foundation of Egypt, the construction of the Great Pyramid, the Sphinx, the long-rumored Hall of Records, and some of the vast labyrinth of artifacts which Cayce claims will be found within it under the sands of Egypt.

Mandeville also claims that his work provides the first time that any psychic has been scientifically examined and given an objective scientific score for accuracy. The three volumes in the "Return of the Phoenix" demonstrate how the author's five years of scientific analysis and research has resulted in a score of 92% for Cayce's historical accuracy. The

author claims that this score is significant because scientists can rely upon it in using the archeological, geological, and geophysical clues which Cayce left. Now for the first time, Mandeville argues, explorers, scientists, researchers, and scholars will have a serious tool for making full use of Cayce's amazing psychic talent for solving historical riddles and making new discoveries, such as with the Hall of Records which is buried near the Sphinx. He illustrates this point by describing how a large number of Cayce's comments about the ancient past have been proven during the last fifty years.

In the third volume of the *"Return of the Phoenix"*, Mandeville claims another scientific first. The author outlines a new scientific theory which he developed from Cayce's clues. The new theory, he calls Vortex Tectonics, explains and predicts El Nino, earthquakes in California, and the occurrences of volcanic activity. "By following Cayce's clues to their ultimate conclusion I discovered that the motion in the earth's crust and the movements in the great tectonic plates is caused by the motion of the earth's axis, literally by the cycles in Chandler's Wobble. Using the principles and correlations I have discovered, any geophysicist or geologist can predict the next great window of major earthquakes for any part of the world, including California's active zones." The author provides dozens of charts of scientific data which prove his claims and reveal how local scientists can do a better job of predicting earthquakes. (See the accompanying charts).

The principles of Vortex Tectonics, Mandeville claims, are revolutionary for science because they demonstrate decisively for the first time that El Nino is caused by volcanic heat which rises from the bottoms of the oceans. To show the connections, Mandeville created a graph which he calls the "X Wave". The chart, which he regards as revolutionary for geophysics as Einstein's famous equation " $E=mc^2$ " was for physics, directly

connects the El Nino weather phenomenon with the ups and downs of the X-Wave in Chandler's Wobble.

Mandeville also provides graphs which prove that there has been a 400% increase in overall tectonic activity during the last 50 years. "These prove Cayce's earth change predictions and demonstrate that his infamous pole shift prediction is on track", Mandeville claims. "This leads me to believe that there may be a 85% probability that a sudden shift in the location of the poles (spin axis) of the earth will occur during the period 2000-2001 with the same range of movement and destruction as the pole shift of 10,500 BC which gave rise to Plato's famous story about the destruction of Atlantis". The areas of the world which will be most hard hit by this avalanche of the crust will be northern Europe and all areas adjacent to the ocean in the North Arc of the Pacific Rim.

Mandeville points out that the publishing of the "*Return of the Phoenix*" on CDROM is also an historical first because it is the first major literary work which was designed to make maximum use of CDROM and hypertext technologies. Since the publisher was not constrained by costs, it is graphically rich and the presentation of the topics on well over 1500 pages is extensively supported by evidence from graphs, charts, and tables of data. All of the graphics and charts which are in black and white in the three printed books are provided in color on the CDROM. Retail distribution is planned for the work and will be available through bookstores by Fall, but at the current time it is available only through the MetaSyn Media web site at "[www.aa.net/~mwm/](http://www.aa.net/~mwm/)".
